

Never get lost again ...

Thanks to GPS, LiveWorld-mobil guides along selected tours - no longer torn maps or missing markers. Your customers can enjoy their trip and will be safely returned to their starting point. Casually, you provide them with background information on the highlights along the way.

Support for people with special needs ...

LiveWorld-mobil assists people with special needs in their mobility: restaurants and hotels with supporting equipment are highlighted acoustically and visually as well as barrier-free access and guidance systems, special parking lots or services.

Presentation tool ...

gistum's LiveWorld-mobil supports you as being a town council, an association, or a tourist marketing society in offering site plans or maps with GPS-guided tours along the touristic highlights in your region - and that on most mobile end devices currently available in the market.

Experience nature and culture ...

LiveWorld-mobil leads to the most beautiful treasures of nature and culture along the tours previously elaborated with you. Let your customers, e.g., stroll on historic traces or show them the touristic features of your town. Never again they will miss a landmark in your region they should be aware of.

Simple operation ...

LiveWorld-mobil is self-explanatory and your customers do not need any geographical knowledge. They do not even need expensive navigation equipment with a built-in GPS-receiver. A java-compliant mobile phone and a cheap mouse GPS receiver will do. There are also no running costs for mobile radiotelephone services.

*LiveWorld-mobil runs device-independent at large extent

Business development ...

In LiveWorld-mobil local companies, restaurants, hotels or stores can present themselves with additional information, such as opening hours, telephone number or special offers.

LIVELORLD
MOBIL

Support for tourists ...

LiveWorld-mobil offers your customers descriptions of the prepared tours and responds to their questions*: Where am I? - In which direction should I be heading? - What is the story behind this landmark? - Where is the nearest restaurant? - How do I get to the nearest bus station?

*In combination with GPS-device enabled

Up-to-date technology ...

LiveWorld-mobil has been programmed with the latest java-technology and uses the advantages of GPS and bluetooth.

For you as a provider:
After the initial data acquisition the updating occurs via an internet-based CMS-system.

For users:
Installation and updating via PC, WAP, bluetooth or MMS.

More information ...
